

Agile metrics: Checklist for project success

Before you start implementing Agile metrics, make sure they meet the following requirements.

- Each metric should be specific to the project and should give meaningful information to team members and project managers
- Team members should understand the value of measuring each metric, so they can use them with a real purpose and apply them in their self-improvement efforts
- Metrics should be considered in conjunction with one another, and not as standalone indicators
- The measurement process should be followed by discussions and actual steps towards continuous improvement
